AWS Docker Terraform Node.js Next.js PostgreSQL GitHub Actions CI/CD IAM TypeScript

PROFESSIONAL SUMMARY

I am a Fullstack Software Engineer, Cloud Infrastructure Engineer, Product Architect, and Security-Focused Systems Designer with a strong multidisciplinary background spanning the complete software delivery lifecycle — from product discovery and UX architecture through backend engineering, cloud infrastructure design, DevOps automation, security implementation, and production operations. I design, build, deploy, secure, and operate modern web applications with a consistent focus on reliability, scalability, and trust.

My engineering practice is grounded in real production experience: I have independently architected and shipped fullstack platforms on cloud-native infrastructure, implemented secure CI/CD pipelines, designed containerised application architectures, and applied infrastructure-as-code principles to manage reproducible, version-controlled environments. I bring working knowledge of AWS services (ECS, Fargate, Lambda, S3, IAM, VPC, CloudWatch, Route 53, RDS, CloudFront, ACM, Secrets Manager), Terraform, Docker, GitHub Actions, Nginx, and Linux systems administration — underpinned by enterprise IT and networking experience gained at the U.S. Department of State – OBO, American Consulate Lagos.

I am positioned to contribute immediately in roles spanning Fullstack Engineering, Cloud Engineering, DevOps, Platform Engineering, Site Reliability Engineering (SRE), Solutions Architecture, and Fintech Infrastructure Engineering — bringing the rare ability to own both product and infrastructure layers of a system end-to-end.

TECHNICAL EXPERTISE MATRIX

Fullstack Engineering	Cloud & DevOps	Security & Infrastructure
≡ Next.js / React / TypeScript	≡ AWS (ECS, Fargate, Lambda, S3)	≡ IAM & RBAC Design
≡ Node.js REST APIs	≡ Terraform / IaC	≡ Secrets Management
≡ PostgreSQL & Firebase	≡ Docker & Containerisation	≡ API Security & Hardening
≡ Authentication Systems	≡ GitHub Actions CI/CD	≡ Network Architecture / VPC
≡ Responsive UI / Tailwind CSS	≡ Vercel Edge Deployment	≡ SSL/TLS & HTTPS
≡ PWA & Performance Opt.	≡ Monitoring & Alerting	≡ Compliance-Oriented Engineering

FULLSTACK ENGINEERING SKILLS

Languages

- TypeScript
- JavaScript
- Python
- SQL
- HTML5
- CSS3
- Bash / Shell

Frontend	- React - Next.js - Tailwind CSS - Responsive Design	- PWA - State Management - Component Architecture - Accessibility (WCAG)
Backend	- Node.js - REST API Design - Serverless Architecture - Webhooks & Events	- Auth & Authorization - Payment Integrations - Background Jobs - API Gateways
Databases	- PostgreSQL - Firebase Firestore - Neon - Aiven	- Data Modelling - Query Optimisation - Connection Pooling - Schema Design

CLOUD INFRASTRUCTURE, DEVOPS & PLATFORM ENGINEERING

AWS Services	- Amazon ECS - AWS Fargate - AWS Lambda - Amazon S3 - Amazon RDS - Amazon VPC - AWS IAM	- Amazon CloudWatch - AWS Route 53 - AWS CloudFront - Elastic Load Balancing (ELB) - AWS Secrets Manager - AWS Systems Manager - AWS ACM
IaC & Automation	- Terraform - Infrastructure Provisioning - Infrastructure Versioning	- Environment Replication - Config Management Principles - Automated Infrastructure Deployment
Containers	- Docker - Multi-Stage Docker Builds - Container Security - Docker Compose	- Container Networking - ECS / Fargate Deployments - Application Packaging - Container Registry (ECR)
CI/CD & DevOps	- GitHub Actions - CI/CD Pipeline Architecture - Deployment Automation - Release Management - Build Pipelines	- Environment Promotion - Continuous Integration - Continuous Delivery - Operational Excellence
Monitoring & Ops	- Amazon CloudWatch - Log Analysis - Metrics & Dashboards - Alerting & Incident Response	- Root Cause Analysis - Performance Tuning - Uptime & Reliability Engineering - Disaster Recovery Concepts

NETWORKING, INFRASTRUCTURE & SECURITY ENGINEERING

Networking	- TCP/IP - DNS & Route 53 - VPC & Subnetting - Routing & Switching - VLAN Design - VPN Concepts		- Load Balancing - Reverse Proxies (Nginx) - SSL/TLS & HTTPS - Traffic Management - Web Application Delivery	
	- Identity & Access Management (IAM) - Authentication Systems - RBAC - Secrets Management - Infrastructure Hardening - Secure Deployment		- Vulnerability Assessment - Threat Mitigation - Security Monitoring - Compliance-Oriented Engineering - API Protection - Zero-Trust Principles	
Linux & Sys	- Linux Server Administration - Shell Scripting - Bash Automation - Process Management - Service Monitoring		- Log Analysis - Server Troubleshooting - Performance Tuning - Env. Configuration	

Fullstack Software Engineer, Cloud & DevOps Engineer · Product Architect

Aug 2023 – Present

AssetMatrix / Independent Product Engineering

Lagos, Nigeria · Remote

I serve as sole Fullstack Engineer, Cloud Infrastructure Engineer, and Product Architect — taking complete ownership of the engineering, architecture, deployment, security, and operational management of production web platforms. I own the full delivery lifecycle: from product discovery and UX architecture through backend systems, cloud deployment, CI/CD automation, security engineering, infrastructure monitoring, and ongoing production operations.

- ≡ Architected and developed production-grade fullstack web applications using Next.js, React, TypeScript, Node.js, and PostgreSQL — from concept through production with full infrastructure and security ownership.
- ≡ Designed and managed cloud-native deployment infrastructure on AWS and Vercel — including environment configuration, deployment strategies, high-availability design, and infrastructure reliability planning.
- ≡ Engineered containerised application architectures using Docker — including multi-stage builds, container security hardening, Docker Compose orchestration, and ECS/Fargate deployment readiness.
- ≡ Authored and maintained Infrastructure as Code (IaC) using Terraform — enabling reproducible environment provisioning, infrastructure versioning, and automated cloud resource management.
- ≡ Designed and implemented GitHub Actions CI/CD pipelines — automating build, test, preview, and production deployment workflows with zero-downtime release strategies.
- ≡ Implemented AWS IAM policies, roles, and least-privilege access controls — integrating AWS Secrets Manager and Systems Manager Parameter Store for secure secrets management across environments.
- ≡ Configured Amazon CloudWatch for application monitoring, log aggregation, custom metric dashboards, and alerting — enabling proactive incident detection and root cause analysis.
- ≡ Engineered VPC architecture including subnet design, security groups, NACLs, and network segmentation — ensuring secure and performant application networking on AWS.
- ≡ Implemented Nginx reverse proxy configurations, load balancing rules, SSL/TLS termination, HTTPS enforcement, and CDN delivery via AWS CloudFront for performant, secure web application delivery.
- ≡ Applied comprehensive security engineering: RBAC, API rate limiting, input sanitisation, CSRF protection, secure HTTP headers, secrets rotation, and infrastructure hardening across all production systems.
- ≡ Designed and implemented secure payment processing and escrow-inspired transaction systems using Paystack — including webhook signature verification, idempotency controls, fund locking, and automated payout workflows.
- ≡ Optimised PostgreSQL database performance on Neon and Aiven — including schema design, query optimisation, connection pooling strategies, and serverless database reliability engineering.
- ≡ Managed Linux server environments including shell scripting for automation, log analysis, process management, service monitoring, and production performance tuning.
- ≡ Maintained full operational ownership of production systems — including incident response, root cause analysis, performance monitoring, backup strategies, and reliability improvement initiatives.

Stack: Next.js · React · TypeScript · Node.js · PostgreSQL · Firebase · AWS (ECS, S3, IAM, VPC, CloudWatch, Route 53, Lambda, RDS, CloudFront, ACM, Secrets Manager) · Docker · Terraform · Nginx · Paystack · Tailwind CSS · GitHub Actions · Vercel · Neon · Aiven

Career Break · Independent Learning & Skill Development Aug 2022 – Aug 2023

IT Specialist & Networking Engineer

Jul 2021 – Aug 2022

U.S. Department of State – Overseas Buildings Operations (OBO)

American Consulate Lagos · Victoria Island, Lagos, Nigeria

I worked as an IT Specialist and Networking Engineer supporting enterprise-grade infrastructure operations within a high-security, mission-critical diplomatic environment. My scope encompassed enterprise network administration, systems reliability, infrastructure maintenance, Linux and Windows server support, and technical operations within a structured, U.S. government compliance framework.

- ≡ Configured, monitored, and maintained enterprise network infrastructure, switching, routing, and VLAN architectures within a mission-critical diplomatic operational environment.
- ≡ Supported enterprise network connectivity, structured cabling, secure communications systems, and campus-wide endpoint management for consulate operations.
- ≡ Diagnosed and resolved complex network incidents, connectivity failures, hardware faults, and infrastructure performance issues — maintaining minimal downtime impact under strict SLA constraints.
- ≡ Administered Linux and Windows server environments — including patch management, OS updates, account provisioning, Active Directory administration, and service monitoring.
- ≡ Supported VPN configuration, network security policies, access control frameworks, and firewall rule management within U.S. government compliance and security standards.
- ≡ Collaborated with multidisciplinary engineering and diplomatic operations teams to maintain secure, high-availability enterprise technology environments meeting federal IT governance requirements.
- ≡ Developed a security-first engineering mindset through deep exposure to U.S. government IT governance, IAM frameworks, compliance-driven infrastructure practices, and operational security protocols.

Key Areas: Enterprise Networking · TCP/IP · VLAN Design · Routing & Switching · Active Directory · Linux & Windows Administration · VPN · Network Security · IT Governance & Compliance · Incident Response

TrustPoint — Secure Freelance Payment & Escrow Platform

Founder · Product Architect · Sole Fullstack & Cloud Engineer

TrustPoint is a trust-centred digital payment protection and escrow transaction platform I designed, built, and deployed end-to-end — addressing payment uncertainty between freelancers and clients. I owned the entire product lifecycle including UX architecture, fullstack engineering, cloud infrastructure, security design, CI/CD, and production operations.

- ≡ Designed full product architecture including multi-step contract creation, fund locking, milestone-based release workflows, and dispute management — all persisted in PostgreSQL with a full audit trail.
- ≡ Engineered escrow-inspired payment workflows via Paystack — payment link generation, conditional fund holding, approval trigger logic, webhook signature verification, and automated payout processing.
- ≡ Implemented containerised deployment architecture with Docker and multi-stage builds — optimised for security, reproducibility, and ECS/Fargate deployment readiness.
- ≡ Authored Terraform IaC modules for cloud resource provisioning — enabling version-controlled, reproducible environment management across development and production.
- ≡ Configured GitHub Actions CI/CD pipelines with automated testing, Docker image builds, ECR pushes, and zero-downtime Vercel/ECS production deployments.
- ≡ Applied AWS IAM least-privilege policies, Secrets Manager integration, CloudWatch monitoring, and VPC-level network security for production-grade infrastructure protection.
- ≡ Implemented Nginx reverse proxy with SSL/TLS termination, HTTP/2, rate limiting, and security headers — with AWS CloudFront CDN for global performant delivery.

Stack: Next.js · React · TypeScript · PostgreSQL · Paystack · Firebase Auth · Docker · Terraform · AWS (ECS, S3, IAM, VPC, CloudWatch, CloudFront, Secrets Manager, ACM) · GitHub Actions · Nginx · Vercel · REST APIs

Anywork365 — Service Marketplace Platform

Sole Fullstack & Cloud Engineer · Product Designer · Systems Architect | AssetMatrix

Anywork365 is a scalable, trust-oriented service marketplace connecting users with skilled professionals across Nigeria and beyond. I was sole engineer and technical lead — responsible for all layers: product, frontend, backend, database, cloud infrastructure, security, and DevOps.

- ≡ Led complete end-to-end delivery lifecycle across product design, fullstack engineering, cloud infrastructure, CI/CD automation, and production operations.
- ≡ Architected scalable fullstack systems on cloud-native infrastructure — Next.js, TypeScript, Node.js, PostgreSQL — supporting listings, profiles, bookings, and review workflows.
- ≡ Engineered Dockerised application packaging with multi-stage builds — container security hardening and ECS/Fargate deployment readiness for cloud-native scalability.
- ≡ Designed AWS-based infrastructure architecture covering VPC, IAM, ECS, S3, RDS, CloudWatch, and Route 53 — with Terraform for environment provisioning and management.
- ≡ Implemented GitHub Actions CI/CD pipelines with staged build, test, preview, and production deployment workflows — delivering continuous integration with zero-downtime releases.
- ≡ Optimised application performance through code splitting, serverless cold-start mitigation, CDN caching via CloudFront, and PostgreSQL query performance tuning.

Stack: Next.js · React · TypeScript · Node.js · PostgreSQL · Firebase · Docker · Terraform · AWS (ECS, S3, IAM, VPC, RDS, CloudWatch, CloudFront) · Tailwind CSS · GitHub Actions · Vercel · REST APIs

AI & Cybersecurity Research — Intelligent Trust Infrastructure

Research Engineer · Ongoing

I am actively exploring the intersection of cloud security, identity engineering, and AI-driven fraud prevention — with a focus on designing next-generation trust infrastructure for fintech platforms and emerging digital economies.

- Researching zero-trust IAM architecture patterns, workload identity, and fine-grained access control for cloud-native multi-tenant systems.
- Exploring ML-powered fraud detection — behavioural anomaly analysis, risk scoring models, and real-time transaction monitoring for payment platforms.
- Investigating AI-driven identity verification and adaptive authentication systems for high-trust fintech applications.
- Studying cloud security posture management (CSPM), DevSecOps pipelines, and automated compliance tooling for production infrastructure.

Focus: Zero-Trust IAM · ML Fraud Detection · AI Risk Scoring · CSPM · DevSecOps · Fintech Security Architecture

EDUCATION

Master of Science (M.Sc.) — Information Technology

2023

University of the People

Advanced information systems · Enterprise technology management · Software engineering principles · Systems architecture · Cloud computing · Modern infrastructure.

Bachelor of Science (B.Sc.) — Computer Science

2017

University of the People

Software engineering · Systems analysis · Networking · Databases · Algorithms · Programming · Distributed computing · Information security.

CORE ENGINEERING STRENGTHS

◆ End-to-End Product & Cloud Ownership

I design, build, deploy, and operate complete systems — from UX through cloud infrastructure and production operations.

◆ Cloud-Native Infrastructure Design

I architect AWS-based, container-native, IaC-managed infrastructure built for reliability, security, and scalability.

◆ DevOps & CI/CD Automation

I build automated delivery pipelines that enforce code quality, enable continuous deployment, and eliminate manual toil.

◆ Security-First Engineering

I embed IAM, secrets management, RBAC, network security, and infrastructure hardening into every system I build.

◆ Payment & Fintech Systems

I bring deep experience in secure payment flows, escrow architecture, webhook integrity, and financial trust infrastructure.

◆ Fullstack Product Engineering

I own the complete stack — React/Next.js frontends, Node.js APIs, PostgreSQL databases, and cloud deployment layers.

◆ Networking & Infrastructure Depth

Enterprise IT background gives me rare TCP/IP, VPC, DNS, load balancing, and network security depth in a software engineer.

◆ Systems Thinking & Reliability

I design for failure — building observable, resilient, high-availability systems with strong operational practices.

ADDITIONAL INFORMATION

- I am deeply passionate about engineering systems that increase digital trust, reliability, and financial security in emerging digital economies.

- ≡ I maintain strong ongoing interest in cloud security, DevSecOps, intelligent fraud prevention, infrastructure automation, and AI-driven identity systems.
- ≡ I continuously deepen expertise in distributed systems design, cloud architecture patterns, container orchestration, IaC best practices, and applied ML for fintech.
- ≡ I am experienced with Git-based collaboration workflows, feature-branch strategies, pull-request reviews, semantic versioning, and production deployment governance.
- ≡ I am available for remote and hybrid engagements — committed to delivering high-quality, maintainable, production-grade engineering outcomes across fullstack, cloud, and DevOps domains.
